## *Persephone Rising* - Carol S. Pearson 2015-10-13

Nautilus Award Winner In this empowering work, the bestselling author of *The Hero Within* and *Awakening the Heroes Within* speaks to the heroine in every woman, offering potent strategies to forge lives of greater happiness and fulfillment—through activating the archetypes inherent in the ancient Greek myth of Demeter and Persephone. Our era of professional and familial pressures, constant connection, and a renewed debate on “having it all” presents unprecedented challenges to contemporary women. In *Persephone Rising*, celebrated scholar of depth psychology and archetypes Carol S. Pearson brings a fresh vision for meeting those challenges and rising above them, as only she can. Drawing on her profound understanding of myth's enduring power to catalyze transformations, Pearson guides readers on a journey of self-discovery, teaching us how to activate and apply the archetypes of Demeter and Persephone, as well as Zeus and Dionysus, in our own lives—empowering readers to see the unexpected choices and opportunities available to us all. Illuminating ancient wisdom for a modern audience, *Persephone Rising* offers meaningful and effective strategies to answer the call to heroism in our own lives: to locate and harness the unique potential within each of ourselves, and ultimately to develop our own innate heroic gifts. Just as Demeter and Persephone discovered, in the midst of great difficulty, their own powers, gifts, and abilities for creating a better path not only for themselves, but the

world, Persephone Rising teaches that each one of us has more options than choosing whether to lean in or out—we have the power to change ourselves, and thus our world.

**National Cyber Emergencies** - Greg Austin 2020-02-13

This book documents and explains civil defence preparations for national cyber emergencies in conditions of both peace and war. The volume analyses the escalating sense of crisis around state-sponsored cyber attacks that has emerged since 2015, when the United States first declared a national emergency in cyberspace. It documents a shift in thinking in the USA, from cooperative resilience-oriented approaches at national level to more highly regulated, state-led civil defence initiatives. Although the American response has been mirrored in other countries, the shift is far from universal. Civil defence strategies have come into play but the global experience of that has not been consistent or even that successful. Containing contributions from well-placed scholars and practitioners, this volume reviews a selection of national experiences (from the USA, Australia, India, China, Estonia, and Finland) and a number of key thematic issues (information weapons,

alliance coordination, and attack simulations). These demonstrate a disconnect between the deepening sense of vulnerability and the availability of viable solutions at the national level. Awareness of this gap may ultimately lead to more internationally oriented cooperation, but the trend for now appears to be more conflictual and rooted in a growing sense of insecurity. This book will be of much interest to students of cyber security, homeland security, disaster management, and international relations, as well as practitioners and policy-makers.

A patient's guide to taking charge of your healthcare, building better relationships with doctors, and getting the most out of your visits. Many know from experience that the medical system can be difficult to navigate. Randy Pherson struggled with a medical condition for five years before getting a proper diagnosis—and once he did, had to undergo a major surgery to save his life. Because of his experience, Pherson decided to help others facing similar situations. Using his background of analytics from the CIA, Pherson offers his readers precise, analytical techniques for using the system to their advantage. As traumatic as Pherson's situation was, it is not an isolated

This book contains the proceedings of the second annual Generalized Intelligent Framework for Tutoring (GIFT) Users Symposium conducted in June 2014 at Carnegie Mellon University in Pittsburgh, Pennsylvania, USA. GIFT, the Generalized Intelligent Framework for Tutoring, is a modular, service-oriented architecture developed to lower the skills and time needed to author effective adaptive training. Design goals for GIFT also include capturing best instructional practices, promoting standardization and reuse for adaptive instructional content and methods and evaluation of the effectiveness of tutoring technologies. Truly adaptive systems make intelligent (optimal) decisions about tailoring instruction in real-time and make these decisions based on information about the learner and the instructional context (training environment). The papers presented by experts in the field include authoring, ITS interoperability, user perspectives of GIFT, non-cognitive factors in intelligent tutoring, teachable agents, dialogue-based tutoring methods, and intelligent tutoring for teams.

**Joystick Soldiers** - Nina B. Huntemann 2009-09-10

*Joystick Soldiers* is the first anthology to examine the reciprocal relationship between militarism and video games. War has been an integral theme of the games industry since the

invention of the first video game, Spacewar! in 1962. While war video games began as entertainment, military organizations soon saw their potential as combat simulation and recruitment tools. A profitable and popular relationship was established between the video game industry and the military, and continues today with video game franchises like America's Army, which was developed by the U.S. Army as a public relations and recruitment tool. This collection features all new essays that explore how modern warfare has been represented in and influenced by video games. The contributors explore the history and political economy of video games and the "military-entertainment complex;" present textual analyses of military-themed video games such as Metal Gear Solid; and offer reception studies of gamers, fandom, and political activism within online gaming.

### **Capstone Project** - Zoleka Jones 2015

Research supports the idea that physical activity and exercise can help the negative impact that non-activity can have on the body and on the mind. This research proposal is taking a closer look at the impact physical exercise has on the mind. This aspect of the benefits of physical activity has recently been closely looked at due to the increasing number of people have mild cognitive impairment. Studies have shown that people with mild cognitive impairment are at a greater risk of developing dementia and Alzheimer's diseases. The development of this can become advanced cognitive impairments and decrease the person's ability to care for themselves properly and independently. This self-care deficits then leads to increased emergency care and exacerbation of chronic illness. The implementation of this structured physical activity should be done with the intent to be performed several times per week to the age group that have been shown to have the most promising results. The area chosen to implement this structured exercise is adult

medical day. The type of exercise chosen was resistance training. The introduction of physical activity with the intent to prevent or decrease mild cognitive impairment can help delay or possibly prevent the progression of cognitive impairment to a more debilitating illness.
