There are few publications  
about chemotherapy in

children, and none of them is a book aimed at pharmacists. Pediatric Oncology Pharmacy is an area where more and more specific knowledge is required in daily practice. Pharmacists who work in pediatric oncology area do not have a book directed at them; none of the oncopediatric books addresses topics unique to pharmacy — such as manipulation of cytotoxic drugs for children, analysis of oncopediatric prescriptions, clinical pharmacy in oncopediatrics, pharmaceutical care in oncopediatric area, and other subjects that are of exclusive interest to these professionals, but no less essential for a therapy of excellence. As for this need, the purpose of this book is to be a guideline for all subjects that pediatric oncology pharmacists need to know to work in this area. It will be an essential guide to pediatric oncology pharmacists, clinical pharmacists, pharmaceutical residents who work with drug therapy in children and pharmaceutical researchers. It

will be a pocket guide to assist in daily practice, and it will be essential to Pediatric Oncology/Hematology Institutions. The essential propose of this book is to be the first one focusing pediatric oncology for pharmacists.

Clinical Pharmacist's Guide to Biostatistics and Literature Evaluation - Robert DiCenzo 2011

Whether you are interpreting the medical literature to optimize patient care, improve health outcomes, or generate hypothesis for research, an understanding of biostatistics is essential for success. Despite exposure to biostatistics in undergraduate and

professional education, pharmacists tend to be less confident in their knowledge of biostatistics and their ability to interpret the medical literature than in their clinical skills. This book was developed to bolster the pharmacist's knowledge and confidence for using biostatistical tools for interpreting the literature. With material drawn from ACCP's renowned Pharmacotherapy Self-Assessment Program (PSAP) and the live pharmacotherapy preparatory course Updates in Therapeutics, editor Robert DiCenzo, Pharm.D., FCCP, BCPS, has designed this review to support pharmacists' preparation for the Pharmacotherapy and Ambulatory Care Board of Pharmacy Specialties (BPS) examinations.

Pocket Guide to Critical Care Pharmacotherapy - John Papadopoulos 2014-11-19

This is a no-nonsense guide to drug treatment in the intensive care unit. It covers the most commonly encountered conditions and is organized by system. Management of each condition is tersely outlined step-by-step in table format. The book also includes non-drug information that is essential to making informed, evidence-based pharmacotherapy decisions, such as risk scores, scales, and assessment tools. The Second Edition has been revised to reflect the latest critical care practice guidelines and up-to-date drug and non-drug information.

Community Pharmacy - Paul Rutter 2016-12-03

Now in its fourth edition, this best-selling book is fully updated to address the ever

increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing community pharmacists to manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely. Government

policy now encourages chronic disease management as a self-care activity, and could well be the largest area for future growth of reclassification of medicines. Pharmacists, now more than ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment. Community Pharmacy is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners. Key features Guidance for arriving at a differential diagnosis Practical prescribing tips Trigger points for referral boxes Other hints and tips boxes Specific questions to ask boxes Case studies Self-assessment questions Consistent approach gives: Anatomy overview History taking and physical examination Prevalence and epidemiology Aetiology Arriving at a differential diagnosis Clinical features Conditions to eliminate Likely causes Unlikely causes Very unlikely causes Evidence base

Hanafy Mahmoud 2019-03-28

This comprehensive, first-of-its-kind title is an indispensable resource for pharmacists

looking to learn or improve

crucial patient assessment

skills relevant to all pharmacy

practice settings. Pharmacists'

role as health care

practitioners is evolving as

they are taking a more active

part in primary patient care --

helping patients manage their

medications and diseases,

providing patient education,

and, in some jurisdictions,

prescribing and adapting

medications. To perform their

day-to-day duties, pharmacists

are best-served using a

framework called the patient

care process. This framework

involves three steps: patient assessment; care plan

development and

implementation; and

monitoring and follow up.

Organized in four parts, this

practical book begins with

introductory chapters

regarding the basics of patient

assessment and the patient

care process. Part II includes a

detailed assessment of common

symptoms encountered by

pharmacists. Part III discusses

assessment of patients with

various chronic illnesses. Part

IV addresses select specialized

topics and assessment

considerations. An invaluable

contribution to the literature,

Patient Assessment in Clinical

SETTINGS Community and Clinical Pharmacy Services teaches pharmacy students and practicing pharmacists how to provide advanced levels of pharmacy services in community and clinic settings designed to help patients achieve specific health goals and treat common disease states. This unique text provides practical--rather than merely ideological--ways for pharmacists to utilize their extensive clinical knowledge and fill a major gap in American health care. It discusses barriers, necessary skills, required knowledge, and issues related to preparation, interventions, patient outcomes, economic aspects, and marketing considerations for therapeutic areas commonly addressed in the outpatient setting. The beginning of the book delves

into the general management skills necessary to provide and implement advanced patient care services, including documentation, patient interviewing, and medication therapy management. Important chapters discuss disease states that would most likely be amenable to development of pharmacy services, including: Asthma Smoking Cessation Diabetes Hypertension Osteoporosis Obesity Also covered are immunizations, anticoagulation, and cardiometabolic services.
