The CIA - William Blum 1986

"The CIA: a forgotten history tells the remarkable story of the CIA interventions in more than fifty countries, from the earliest actions in China to the present day campaign against Nicaragua. Investigative writer William Blum describes the grim role played by the Agency in overthrowing governments, preventing elections, assassinating leaders, suppressing revolutions, manipulating trade unions and manufacturing 'news' -- in detail that's never before appeared in one book. Blum also shows how the mainstream media have frequently not bothered to probe, highlight or even report many of America's aggressive actions abroad. Effectively, this has helped the US Government camouflage its operations and intentions abroad ever since World War II. Washington's deception and the media's laxity combine to leave us functionally illiterate about the history of modern US foreign policy. And that, the author believes, is good neither for democracy, nor for development and world peace. This immensely readable account has been carefully pieced together from widely disparate sources and with a scrupulous eye to documentation." --

[Preparing the U.S. Army for Homeland Security](#) - Eric Victor Larson 2001

Homeland security encompasses five distinct missions: domestic preparedness and civil support in case of attacks on civilians, continuity of government, continuity of military operations, border and coastal defense,

and national missile defense. This report extensively details four of those mission areas (national missile defense having been covered in great detail elsewhere). The authors define homeland security and its mission areas, provide a methodology for assessing homeland security response options, and review relevant trend data for each mission area. They also assess the adequacy of the doctrine, organizations, training, leadership, materiel, and soldier systems and provide illustrative scenarios to help clarify Army planning priorities. The report concludes with options and recommendations for developing more cost-effective programs and recommends a planning framework that can facilitate planning to meet homeland security needs.

Numerical Investigation of Aerodynamics of Canard-Controlled Missile Using Planar and Grid Tail Fins.

Part 1. Supersonic Flow - James DeSpirito 2002-09

Viscous computational fluid dynamic simulations were used to predict the aerodynamic coefficients and flowfield around a generic canard-controlled missile configuration in supersonic flow. Computations were performed for Mach 1.5 and 3.0, at six angles of attack between 0 and 10, with 0 and 10 canard deflection, and with planar and grid tail fins, for a total of 48 cases. Validation of the computed results was demonstrated by the very good agreement between the computed aerodynamic coefficients and those obtained from wind tunnel measurements. Visualizations of the flowfield showed that the canard trailing vortices and downwash produced a low-pressure region on the starboard side of the missile that in turn produced an adverse side force. The pressure differential on the leeward fin produced by the interaction with the canard trailing vortices is primarily responsible for the adverse roll effect observed when planar fins are used. Grid tail fins improved the roll effectiveness of the canards at low supersonic speed. No adverse rolling moment was observed with no canard deflection, or at the higher supersonic speed for either tail fin type due to the lower intensity of the canard trailing vortices in these cases. Flow

visualizations from the simulations performed in this study help in the understanding of the flow physics and can lead to improved canard and tail fin designs for missiles and rockets.
