The PerformanceStat Potential - Robert D. Behn 2014-06-24

It started two decades ago with CompStat in the New York City Police Department, and quickly jumped to police agencies across the U.S. and other nations. It was adapted by Baltimore, which created CitiStat—the first application of this leadership strategy to an entire jurisdiction. Today, governments at all levels employ PerformanceStat: a focused effort by public executives to exploit the power of purpose and motivation, responsibility and discretion, data and meetings, analysis and learning, feedback and follow-up—all to improve government's performance. Here, Harvard leadership and management guru Robert Behn analyzes the leadership behaviors at the core of PerformanceStat to identify how they work to produce results. He examines how the leaders of a variety of public organizations employ the strategy—the way the Los Angeles County Department of Public Social Services uses its DPSSTATS to promote economic independence, how the City of New Orleans uses its BlightStat to eradicate blight in city neighborhoods, and what the Federal Emergency Management Agency does with its FEMASat to ensure that the lessons from each crisis response, recovery, and mitigation are applied in the future. How best to harness the strategy's full capacity? The PerformanceStat Potential explains all.

Defining Management - Lars Engwall 2016-06-10

Defining Management charts the expansion of management as an idea and practice from a time when it was limited to churches and households to its current ubiquity, focusing in particular on the role of business schools, consultants, and business media in this process. How did an entire industry develop around business schools, consultants, and business media who are now widely considered the authorities regarding best management practice? This book shows how these actors - on their own and in interaction - became taken-for-granted and gained such definitional power over management and managers, expanded across the globe from often modest and not always respected origins, and impacted, and continue to impact businesses and, increasingly, the broader economic and social context. Building on extant and some new research, the book is unique in bringing together issues and actors that have been examined elsewhere separately. Any student or professional of management interested in the evolution of their field or the rise of business schools, consultants and business media will find this book both novel and thought-provoking.

Accounting for Management Control - David Otley and Kenneth Merchant Clive Emmanuel 2013-11-21

The Ecology of Management Accounting and Control Systems - Seleshi Sisaye 2006

Recent technological and environmental changes have shifted the operations of management control systems from meeting separate, individually based budgetary goals to management control techniques that emphasize group and team control structures. Accordingly, team-based management controls that incorporate normative, instrumental, and coercive controls are being used in complex organizations to monitor production quality and cost control, manage incentive systems, and design and implement management accounting systems. This book provides the first attempt to bring the theory of organizational ecology to the forefront in behavioral accounting research. The adaptation framework has been utilized to incorporate environmental and technological issues as well as organizational structural and contextual factors to examine recent developments in management control systems, particularly the use of accounting systems in managing the performance of teams. Researchers and teachers in graduate programs, managers in business, and service organizations who use work groups to manage their organization activities should find this work an immense addition to their collections.

Solar Hydrogen Energy Systems - Gabriele Zini 2012-03-15

It is just a matter of time when fossil fuels will become unavailable or uneconomical to retrieve. On top of that, their environmental impact is already too severe. Renewable energy sources can be considered as the most important substitute to fossil energy, since they are inexhaustible and have a very low, if none, impact on the environment. Still, their unevenness and unpredictability are drawbacks that must be dealt with in order to guarantee a reliable and steady energy supply to the final user. Hydrogen can be the answer to these problems. This book presents the readers with the modeling, functioning and implementation of solar hydrogen energy systems, which efficiently combine different technologies to convert, store and use renewable energy. Sources like solar photovoltaic or wind, technologies like electrolysis, fuel cells, traditional and advanced hydrogen storage are discussed and evaluated together with system management and output performance. Examples are also given to show how these systems are capable of providing energy independence from fossil fuels in real life settings.

Modern Product Costing Technique in the Age of Competition - Romeo G. Manalo 2011-03-24

This book addresses an important issue -- the nature of and evidence for success in the transfer costing of internal services or shared services or products within a company. The case of activity-based costing (ABC) is used to explore how the proponents have developed a framework linking Quality, Cost and Delivery (QCD) components of products and services. The QCD performance indices, which are the natural properties of products and services, will form part of the Service Level Agreements between the internal service providers (Shared Services Centers) and internal customers (Profit Centers) of the company. This framework optimizes the use of overhead expenses to the end products of the company. This book also discusses the various cost components of the products and services using the full absorption costing principle. It is a revolutionary idea in the sense that all activity costs are considered variable costs and

product costs come from activity costs using various cost drivers. The Principal Component Analysis (PCA), the multi-variate statistical tool, is applied using SPSS to analyze which independent variables contribute significantly to the Product Unit Price (PUP) and which should be given more emphasis in decision making process.

Strategy, Control and Competitive Advantage - Erik Jannesson 2013-10-25

How should firms' control systems be designed and used to formulate and implement strategies that will contribute to competitive advantage and sustained high performance? This book offers some thought-provoking suggestions. It contains empirical studies of such diverse manufacturing enterprises as Atlas Copco, Electrolux, Saab, Scania, SCA Packing and Volvo, as well as an insurance company and two chamber orchestras. All firms and organizations presented offer interesting and exciting insights, each in a specific way and each with a fascinating history. The book presents research on the relationship between strategy, control and competitive advantage over extended periods and at several strategic levels, while also taking into account the existence of multiple control systems in a single firm or other organization. Readers are offered an in-depth look into how changes in the environment lead to adjustments in strategies and control systems. It is shown, in addition, how difficult and challenging it can be to implement these changes, and why such efforts are not always successful. But perhaps most importantly, the book conveys an in-depth understanding of how strategies and control systems affect competitive advantage and performance. In both its coverage and focus, the book is unique. Not only does it provide valuable contributions to the research field of strategy and management control; it also represents a substantial commitment in terms of resources and involvement over an extended period. The book is highly recommended to researchers, practitioners, graduate students and all others interested in this area.

New Directions in Management and Organization Theory - Jeffrey A. Miles 2014-03-25

This book is a collection of the best seventeen papers from the first Management Theory Conference held at the University of the Pacific in San Francisco, California, on September 27 and 28, 2013. The authors of these papers are some of the best management researchers in the world, including: Anette Mikes, Robert S. Kaplan, and Amy C. Edmondson (Harvard Business School); Sarah Harvey (University College London); Randall S. Peterson (London Business School); Jack A. Goncalo and Verena Krause (Cornell University); Karen A. Jehn (University of Melbourne); Yally Avrahampour (London School of Economics and Political Science); Tammy L. Madsen (Santa Clara University); and Sim B. Sitkin (Duke University). All of the papers

in this book present the latest theoretical developments that were discussed at the first Management Theory Conference. The purpose of the conference was to help address the shortage of new management and organization theories. The mission of the conference was to facilitate, recognize, and reward the creation of new theories that advance our understanding of management and organizations. The conference was held to motivate management researchers to create new theories and to provide researchers with a supportive forum where those new theories could be presented, discussed, and published. Chapter Seventeen is the winner of the Wiley Outstanding New Management Theory Award. Authors Chris P. Long, Sim B. Sitkin, and Laura B. Cardinal present a theory to explain the drivers of managerial efforts to promote trust, fairness, and control. They theorize how superior-subordinate conflicts stimulate managers' concerns about managerial legitimacy and subordinate dependability in performing tasks, and hypothesize how managers attempt to address these concerns using trustworthiness-promotion, fairness-promotion, and control activities. This book also contains written summaries of the two keynote addresses that were given at the conference by Roy Suddaby (editor of Academy of Management Review) and Jeffrey Pfeffer (Stanford University), which comprise Chapters Eighteen and Nineteen. Professors Suddaby and Pfeffer present a fascinating debate of the future and new directions of management and organization theories.
