Evaluating Environment in International Development - Juha I. Uitto 2014-04-24

More than twenty years after the Earth Summit was held in Rio de Janeiro in 1992, both national and international actors in governmental and nongovernmental fields are still searching for insights into how sustainable development can be advanced and environmental concerns incorporated into the development agenda more effectively. Moreover, climate change has emerged as a preeminent challenge to both the environment and to development. Evaluating Environment in International Development provides international perspectives and in-depth knowledge of evaluating development and the environment and

applies evaluation knowledge to climate change mitigation and adaptation. The book focuses on the approaches and experiences of leading international organizations, not-for-profits, and multilateral and bilateral aid agencies to illustrate how systematic evaluation is an essential tool for providing evidence for decision-makers. It provides novel and in-depth perspectives on evaluating environment and sustainability issues in developing countries. Moving beyond projects and programmes, it considers aspects such as evaluating normative work on the environment and evaluating environmental consequences of economic and social development efforts. This original collection should be of interest to scholars of environment studies, development studies, international relations, sustainable development and evaluation, as well as practitioners in international organizations and development and environmental NGOs.

The GMO Deception - Sheldon Krinsky 2014-06-03

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.
