MATLAB® Primer for Speech Language Pathology and Audiology - Frank R. Boutsen

2015-11-30

MATLAB® Primer for Speech-Language

Pathology and Audiology provides training and access to MATLAB®, the computational language developed by MathWorks®. While there are MATLAB® textbooks and manuals written for the field of engineering, there are no textbooks targeting allied health disciplines, particularly speech-language pathology and audiology. Research and practice in this field can greatly benefit from quantification and automation in data management, a domain that is increasingly labor-intensive. The text anticipates and promotes increased reliance on quantification and automation in the fields of speech-language pathology and audiology. This book is intended for students, practitioners, and researchers in speech-language pathology and audiology who wish to increase their productivity by incorporating and automating common research procedures and data-analysis calculations, or who wish to develop new tools and methods for their own paradigms and data processing. It assumes no prior knowledge of

programming, but requires the reader to have a grasp of basic computer skills, such as managing folders, moving files, and navigating file paths and folder structures. Content and style are chosen so as to lower the threshold for an audience who has limited training in computer science. Concepts are presented in a personalized writing style (almost a dialogue with the reader), along with a didactic format similar to programmed instruction, using applications and work assignments that are concrete and manageable. Key features include:

- * A comprehensive introduction for the user in an effort to limit background knowledge needed to understand the content
- * Several mathematical review appendices
- * Exercises for the student to apply skills learned in laboratory and clinical applications

IEP Goal Writing for Speech-Language Pathologists - Lydia Kopel 2020-06-15

IEP Goal Writing for Speech-Language Pathologists: Utilizing State Standards, Second Edition familiarizes the speech-language pathologist (SLP) with specific Early Learning Standards (ELS) and Common Core State Standards (CCSS) as well as the speech-language skills necessary for students to be successful with the school curriculum. It also describes how to write defensible Individualized Education Plan (IEP) goals that are related to the ELS and CCSS. SLPs work through a set of steps to determine a student's speech-language

needs. First, an SLP needs to determine what speech-language skills are necessary for mastery of specific standards. Then, the SLP determines what prerequisite skills are involved for each targeted speech-language skill. Finally, there is a determination of which Steps to Mastery need to be followed. It is through this process that an SLP and team of professionals can appropriately develop interventions and an effective IEP. The text takes an in-depth look at the following speech-language areas: vocabulary, questions, narrative skills/summarize, compare and contrast, main idea and details, critical thinking, pragmatics, syntax and morphology, and articulation and phonological processes. These areas were selected because they are the most commonly addressed skills of intervention for students aged 3 to 21 with all levels of functioning. For each listed area, the text analyzes the prerequisite skills and the corresponding Steps to Mastery. It provides a unique, step-by-step process for transforming

the Steps to Mastery into defensible IEP goals. The key is to remember that the goal must be understandable, doable, measurable, and achievable. This text provides clear guidelines of quantifiable building blocks to achieve specific goals defined by the student's IEP. School-based SLPs are instrumental in helping students develop speech and language skills essential for mastery of the curriculum and standards. All SLPs working with school-aged children in public schools, private practice, or outpatient clinics will benefit from the information in this text. New to the Second Edition: * Ten Speech and Language Checklists for determining speech and language needs of an individual, 3–21 years of age, as well as measuring progress. * Material on measuring progress including five performance updates. * Goal writing case studies for four students of different ages and skill levels. * A thoroughly updated chapter on writing goals with up-to-date examples. * Revised Prerequisite Skills and Steps to Mastery

to reflect the current state of research. *
Expanded focus on evidence-based practice.

Assessment and Treatment of School-age Language Disorders - Rita C. Naremore 2001

This book is a practical compendium of assessment instruments and intervention ideas for school-based speech-language pathology who are eager to take their practice beyond traditional language tests and caseload concerns. The manual focuses on three areas of language where language impaired children in elementary school need particular help: phonological awareness, narrative skills, and advanced literacy skills (identifying and stating the main idea, for example). Inside, the reader will find non-standardized assessment tasks, sample interventions activities, sample goals, and objectives and sample lesson plans. These tools provide a framework onto which the clinician can graft activities and materials appropriate for individual children. This is a

practical, useful, reality based book of assessment tasks and intervention ideas. It will also provide ideas for helping children who lack these abilities, for writing appropriate goals and objectives and for sharing information about the child's progress with teachers and parents.

Common Core State Standards and the Speech-Language Pathologist - Lissa A. Power-deFur
2015-10-01

Common Core State Standards and the Speech-Language Pathologist: Standards-Based Intervention for Special Populations is a tool for

the analysis of the Common Core State Standards (CCSS) and the development of interventions to meet student-specific needs. The CCSS is an education initiative in the United States that details what K-12 students should understand in English language arts and mathematics by the end of each grade. The initiative seeks to establish consistent education standards across the United States and ensure that graduating students are prepared to enter college or the workforce. As of 2015, forty-three states had adopted the CCSS. With the implementation of the CCSS, it is critical that speech-language pathologists collaborate with educators to enable the success of students with communication disorders as well as English language learners. This text offers a practical approach for application of the CCSS with a parallel analysis of children's strengths and needs to create a template for intervention. It addresses strategies to facilitate the success of students in accessing and achieving the

expectations of the general curriculum, with a focus on students with communication disorders, hearing loss, vision loss, deaf-blindness, specific learning disabilities, autism, multiple disabilities, and English language learners.
